

The FozziLogic palette

The magenta moved. It is now dark enough to carry text on white and to take white text on itself, at the same ratio, which means one magenta does both jobs instead of two doing one each.

WAS

#EE2A7B

Fails AA on white

4.00:1 · needs 4.5:1

NOW

#E11771

Passes AA on white

4.60:1 · both directions

HOW FAR IT MOVED

$\Delta E2000$ of 3.95. Side by side you will see it. On its own, against artwork you have not just compared, nobody will. It is a touch deeper and a touch more saturated, not duller.

WHAT IT BOUGHT

Contrast is symmetric, so one value at 4.60:1 works as magenta type on white and as a white label on a magenta fill. The old magenta needed a separate darker step for that.

WHAT YOU HAVE TO REDO

The logo files. Re-export the wordmark and mark at #E11771 so there is one magenta in circulation, and replace the old assets rather than letting both versions float around.

The core four

Click any swatch to copy its hex. Each carries the text colour it passes AA against, and the measured ratio.

Fozzi Magenta

The brand. Logo, one primary action per screen, magenta type on white, the single accent in a layout.

AA on white · 18.38:1

Magenta scale

Eight steps on hue 333. The light end fills areas, the dark end

carries type, and the brand step in the middle now does both.

MAGENTA 08

#FDECF4

Ground only. Section washes, table stripes, callouts

Ink on it · 16.17:1

MAGENTA 20

#F9D1E3

Ground only. Selected states, highlights

Ink on it · 13.35:1

MAGENTA 42

#F29EC3

Chart series, illustration fills, ink type on top

Ink on it · 9.15:1

MAGENTA 60

#ED74AA

The accent on dark grounds. Links and labels in dark mode

On ink · 6.72:1

MAGENTA 100

#E11771

The brand. Logo, primary button, magenta type on white

With white · 4.60:1

MAGENTA 130

#C61463

Hover and pressed states for anything magenta

With white · 5.70:1

MAGENTA 160

#AB1156

Magenta type at small sizes and in print. Clears AAA

On white · 7.13:1

MAGENTA 190

#8C0E46

Deep ground for hero panels and covers

White on it · 9.27:1

Neutral scale Hue 333 throughout at 5% saturation. The three lightest are grounds, Grey 300 is the lightest thing allowed to draw a control, and everything from Grey 400 down clears AA as text on white.

GREY 050

#F9F8F9

Page ground behind white cards

Ink on it · 17.35:1

GREY 100

#F2F0F1

Table headers, disabled fills

Ink on it · 16.20:1

GREY 200

#E3E0E2

Decorative rules between rows. Never a control edge

Exempt · non-functional

GREY 300

#95898E

Input borders, control edges, meaningful icons

On white · 3.36:1

GREY 400

#7A6E73

Lightest text allowed. Timestamps, fine print

On white · 4.88:1

GREY 500

#71666B

Secondary text, captions, placeholders

On white · 5.50:1

GREY 600

#564D51

Body copy where full ink is too heavy

On white · 8.15:1

GREY 700

#3A3537

Dark panels, footers, sidebars

White on it · 12.04:1

GREY 900
#181315
Fozzi Ink. Headings and body
On white · 18.38:1

The sanctioned pairings Every combination below clears WCAG 2.1 AA. Text pairings meet 4.5:1; the control-edge pairing meets the 3:1 non-text threshold.

USE	SAMPLE	RATIO	CLEARs
Body and headings on white	Ink 181315	18.38:1	AA & AAA

Body on a dark panel	Panel copy	10.66:1	AA & AAA
Input border on white	Field edge	3.36:1	AA NON-TEXT

Pairings the system forbids

Brand magenta on ink Contrast is symmetric, so a colour that passes against white cannot also pass against near-black. On dark grounds the accent is Magenta 60.3.99:1

Ink on brand magenta Same pair, same number. Magenta fills take white labels.3.99:1

White on Magenta 60 Magenta 60 is a dark-ground accent and a light fill. It only ever takes ink type.2.73:1

Grey 500 on a tint Tinted grounds raise the requirement. Use Grey 600 or ink.4.00:1

Grey 300 as text Grey 300 draws edges. It never carries words.3.36:1

Rules that follow from the numbers

4.60:1

One magenta, both directions

#E11771 as type on white and white as type on #E11771 are the same pair and the same ratio. That is the whole reason for the change, and it removes the separate button colour the old palette needed.

3.99:1

Never magenta on black

No single colour clears 4.5:1 against both white and near-black; the maths forbids it. On ink and on dark panels the accent is Magenta 60.

7.13:1

Magenta 160 for small type

#E11771 passes AA at any size, but 4.60:1 is a thin margin for 11px captions and for print. Magenta 160 clears AAA and holds up.

3:1

Borders are content too

An input outline has to be visible at 3:1 or the field is not identifiable. Grey 300 is the lightest neutral allowed to draw one; anything lighter is decoration.

HUE 333

No borrowed greys

Every neutral is the magenta hue at 5% saturation. Stock greys run blue and turn #E11771 muddy next to them.

NO OPACITY

Never fade type to soften it

Reducing opacity changes the real contrast ratio and silently breaks compliance. Pick a lighter grey from the scale instead, so the ratio stays known.

The palette applied

WHITE GROUND

Quality of life, measured with the person

Ink for headings, Grey 600 for body, Magenta 160 for the label above. The brand fill carries a white label.

Start an assessment

4.60:1 · 8.15:1

INK GROUND

Quality of life, measured with the person

On dark the accent steps to Magenta 60 and Grey 200 carries the body. The brand magenta does not appear as type here.

Start an assessment

6.72:1 · 14.02:1

TINT GROUND

Quality of life, measured with the person

Magenta 08 reads as branded without competing. Here the button flips to ink, because a magenta fill on a magenta tint loses its edge.

Start an assessment

16.17:1 · 7.17:1

Brand magenta is now #E11771 / rgb(225, 23, 113), replacing #EE2A7B. It was chosen by searching the sRGB gamut for the smallest CIEDE2000 distance from the original among colours that clear 4.5:1 against white, which lands at ΔE2000 3.95.

If re-issuing the logo files is not practical, WCAG 2.1 exempts logotypes from contrast requirements under 1.4.3, so existing artwork in #EE2A7B stays conformant where it functions as the logo. That is a licence to delay, not to keep two magentas in the system indefinitely.

All ratios are WCAG 2.1 relative luminance, computed on these exact hex values. CMYK figures are a naive device-independent conversion and will shift on press; contrast thresholds are a screen standard, so judge printed pieces off a proof rather than these numbers.
